PROFILE

Computer Science student with a growing interest in web development, critical thinking and business concepts. Learning to build user-friendly websites using modern tools and frameworks. Eager to develop practical skills, understand real-world business needs and contribute to meaningful tech projects. Looking forward to contributing to innovative software projects while continuously enhancing my development skills.

PROJECTS

1. ONLINE VOTING SYSTEM (e-Vote)

Role: Backend developer.

Description: A secure, role-based e-voting application for small scale elections.

- Developed admin panel, voter enrollment, and result computation modules.
- Implemented session-based authentication and input validation.
- Hosted project on infinityfree with responsive UI for mobile and desktop.

2. E-COMMERCE PLATFORM (WordWander)

Role: Full stack developer.

Description: A web platform for users to buy the books online.

- Includes user dashboard and admin panel.
- Implemented MySQL database to manage users and content.
- Enhanced UI/UX with responsive design and client-side validation.
